Carl Linnaeus was a famous Swedish botanist, physician, and zoologist who devised the formal, two-part naming system we use today to classify all lifeforms. His original work, *Systema Naturae*, expanded from a short pamphlet into a multi-volume work encompassing 2,400 pages with descriptions of 15,000 species. Linnaeus later published *Species Plantarum*, which contains 1,200 pages describing 7,300 species of plants. As a botanist, Linnaeus would sketch leaves, stems, roots, flowers, and seeds of plants.
